Legacy Vault™

*Because Some Secrets Shouldn't
Be Taken To The Grave!*

If something happened to you, would your loved ones know how to access your banking, insurance, or retirement plan information? Would they know the location of your will, estate plan, how to reach your key advisors, or even know your final wishes? Have you left instructions regarding your online or social media accounts?

Don't Leave A Legacy Of Unanswered Questions!

What Do You Know That No One Else Knows, That Someday They Will Need To Know?

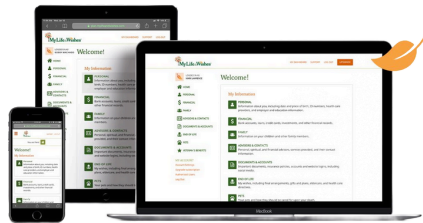

Surviving family members are often left struggling to untangle the complicated financial life and online presence following the death of a loved one. Gone are the days of sorting through file drawers and dusty file boxes for vital documents.

Today, financial, insurance, even social media information is scattered among websites, locked with passwords and security questions, leaving loved ones scrambling for critical information.

And with the increase in natural disasters such as fires, floods, and damaging tornados, housing your critical information and documents in the cloud is imperative.

The **Legacy Vault™** powered by My Life & Wishes is an online planning and storage solution that allows you to keep copies of all your important documents and critical information giving you 24/7 access in the event of any emergency.

Your **Legacy Vault™** guides you through planning, addressing every aspect of your life to help you record the critical information you need access to while providing instruction and guidance for your loved ones.

The **Legacy Vault™** was designed with flexibility in mind;

- Sign up for a single or joint account
- Share your account information with loved ones or a trusted Advisor
- Assign Authorized Users to View Only or Edit certain sections of your account
- Free form areas to include additional notes, instructions, or details
- Access to vast amounts of planning articles, blogs, and resources

The **Legacy Vault™** powered by My Life & Wishes utilizes AES 256 Encryption, the same quality relied upon by banks, the military, and the U. S. Government, as well as SHA 256 encryption with 2048-bit certificates to protect your data. And unlike other institutions, no one can see your data, not even us.
